PATENT Appl. No. 09/957,496 Attorney Docket No. 450100-03493

## Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

## **Listing of Claims:**

1. (Currently Amended) A disk-like recording medium for concentrically recording auxiliary information of a disk in a second area other than a first area for recording contents data of said disk by a predetermined code, the recording medium comprising:

n blocks, each <u>block of said n blocks</u> obtained by dividing said second area into n equal parts in a circumferential direction; and

m frames, each <u>frame of said m frames</u> obtained by dividing said <u>block each block</u> into m equal parts in the circumferential direction[[;]],

wherein said auxiliary information is arranged in said frames in such a manner as to be at equal intervals in the circumferential direction, and a synchronization signal is disposed in each of said frames

wherein said each frame includes a synchronization signal whose pattern is formed by arranging marks or spaces in three or more contiguous channel bits, such that said synchronization signal provides synchronism necessary for a playback apparatus to read said auxiliary information recorded in said second area.

2. (Original) A disk-like recording medium as claimed in claim 1 wherein in one of said frames, k channel bits are arranged at intervals obtained by dividing said frame into k equal parts.
